

2018 SNIS 15th  
Annual Meeting  
July 23-26, 2018  
Hilton San Francisco Union Square | San Francisco, CA

## Greetings SNIS Members and Friends!

As summer approaches, we hope you are already making your plans to join us at the SNIS 15th Annual Meeting in San Francisco, California from July 23-26.

As we make our second visit to the City by the Bay, one glance at the conference agenda shows the outstanding work of the leaders of this year's event. Indeed, the program committee has anchored this year's Annual Meeting in rich content spanning clinical, practice and industry topical areas; the most innovative studies in neurointervention today; discussion sessions that provide expert perspectives to ongoing dialogue; networking opportunities that connect individuals in meaningful ways; and, of course, those coveted moments of rest and relaxation that provide just the perfect balance to a schedule that is packed to the gills.

We will kick off the week with a session dedicated to best practices and future directions in endovascular stroke treatment. We then dive into an exciting session on artificial intelligence — the future is here! Sessions on policy, payment and physician burnout, aneurysm therapy, neurointerventions for CSF pressure extremes and pediatrics follow throughout the week. As we are buoyed by the advances we continue to make, we will also take a moment to look back and celebrate 10 years of the *Journal of NeuroInterventional Surgery (JNIS)*. Additionally we'll spotlight the annual Luminary Lecture, this year provided by Jacques Dion, MD. And, finally, we'll listen in on abstract sessions that will dot our program agenda throughout the week with the most interesting and promising research coming out of investigative neurointerventional centers worldwide.

All SNIS activities require the contributions, resources and enthusiasm of many to keep the wind in our sails, but the effort behind the planning and hosting of the SNIS Annual Meeting truly necessitates an all hands on deck approach. For their enduring presence and partnership mentality, we pay special tribute to our loyal industry friends whose passion for our work is boundless and support of our cause makes so much possible. Your ideas and work on behalf of our specialty continue to advance the highest standards of excellence and keep our field at high tide amidst an ever-evolving healthcare landscape. Thank you for your contributions day in and day out and for your support of the SNIS 15th Annual Meeting.

See you in San Francisco!

Sincerely,

# LUMINARY LECTURE

## Jacques Dion, MD, FSNIS

Jacques Dion, MD, FSNIS, the seventh president of the Society of NeuroInterventional Surgery (then known as ASITN), was born near Quebec City in Lac St. Jean, Canada. Upon graduation from secondary school in Hull, Quebec, he went just across the Ottawa River to the University of Ottawa, where he completed his undergraduate studies, majoring in both premedicine and philosophy.

After completing his undergraduate training, Jacques remained at the University of Ottawa to attend medical school. Hearing the call to “go west” for warmer climates and new adventures, he applied for and was accepted into an elective in radiology at the Long Beach Memorial Veterans Hospital in California. Here, he met Henry Pribam, a neuroradiologist, who was to be a key individual in his ultimate decision to specialize in radiology. On Henry’s recommendation, Jacques applied to and was accepted into postgraduate training at Harbor Hospital at the University of California, Los Angeles (UCLA). While there, Grant Hieshima and Mark Mehringer, both of whom were exploring and introducing new interventional techniques, trained him in angioplasty. This experience allowed Jacques to observe and, to some degree, participate in these interventional procedures.

After completing his residency at Notre Dame Hospital in Montreal, and committed to a career as an interventionalist, he secured a fellowship at the University of Western Ontario in London. During these days, the influence of Dr. Charles Drake and his colleagues had made London one of the world’s most active centers for the study and treatment of CNS vascular diseases. Working with Allan Fox and Fernando Vinuela between 1983 and 1985, Jacques

thrived in this exciting environment and was able to complete fellowships in both neuroradiology and peripheral interventional radiology.

In 1985, his training now completed, Jacques returned to Montreal, where he worked as a staff physician at Saint Luc Hospital. Here, he worked in an 800-bed hospital, in a radiology department he and five other radiologists staffed. He “did it all” and served as the only interventionalist for the faculty. Fernando Vinuela relocated from London, Ontario, to UCLA and, soon after arriving, offered his former fellow a staff position. After taking a few months off in Montreal as a “ski bum,” Jacques moved to Los Angeles and started work at UCLA in the summer of 1987. The practice was rapidly expanding, and Fernando and Jacques subsequently added Gary Duckwiler as a partner in 1989 just after he completed fellowship. Jacques worked at UCLA from the summer of 1987 to August of 1991, when he moved to the University of Virginia. The years at UCLA were special, both because of his colleagues and because of the excitement in developing and introducing the Guglielmi detachable coil.

In September of 1991, Jacques started work in Charlottesville, along with Lee Jensen, a former fellow from UCLA whom he recruited from Richmond. While expanding Jacques’ wine cellar, the two also developed an outstanding clinical and laboratory program at the University of Virginia that graduated a long line of outstanding fellows. In 1998, Jacques left and moved to Emory University in Atlanta to practice as the chief of interventional neuroradiology. He has achieved both national and international recognition both as part of the team that developed the GDC coil as well as pioneering vertebroplasty in North America. It is an honor for the SNIS to have Dr. Dion as our 2018 Luminary Lecturer.
